

Urban Tree Canopy Plan and Goals

Jefferson County, West Virginia

May 2011

Acknowledgments

This project was made possible by the efforts of the following people and organizations, to whom we owe our sincere gratitude:

Herb Peddicord, West Virginia Division of Forestry, Watershed Forester

Frank Rodgers, Cacapon Institute, Director of Education and Outreach

Katie See, City of Charles Town, City Planner

Sarah Kleckner, City of Ranson, Planning Director

Jarlath O'Neill Dunne and the University of Vermont Spatial Analysis Lab

Jefferson County GIS Office

All of the individuals that contributed their time and efforts to the Spring 2011 tree planting projects.

Background

In 2009, Jefferson County, West Virginia (WV), with the assistance of the WV Potomac Tributary Strategy Implementation Team (WV Trib Team), began an Urban Tree Canopy (UTC) assessment project. The County, in its effort to foster wider acceptance of voluntary best management practices (BMPs) for urban tree conservation and plantings, first needed an UTC assessment to determine the extent and location of tree canopy. One important benefit to preserving and extending the tree canopy is that it will reduce excessive storm water runoff. Jefferson County's efforts, in conjunction with its five municipalities, will help WV meet the state's commitment to the Chesapeake Bay Program (CBP) goal to have "at least 5 local jurisdictions ... in each state ... complete an assessment of urban forests, adopt a local goal to increase urban tree canopy and encourage measures to attain the established goal."

Coincidentally, at the same time Jefferson was conducting a tree canopy assessment, the U.S. Forest Service published its first National Planting Priority Index. Jefferson and Berkeley Counties (WV) rank in the highest percentile and are among the highest priority counties within the Chesapeake Bay watershed (Figure 1).

Purpose

Tree canopy is the layer of leaves, branches, and stems of trees that cover the ground when viewed from above. "Urban", as defined by the U.S. Census Bureau, is any census block with a population of 500 people per square mile, or the entirety of any incorporated municipality with a single census block meeting that criteria. Urban Tree Canopy (UTC), therefore, is the study of the tree canopy in and around populated areas. Expanding the UTC provides many benefits to communities, including improved water quality, reducing stormwater runoff, saving energy, lowering city temperatures, reducing air pollution, enhancing property values, providing wildlife habitat, facilitating social and educational opportunities, as well as providing aesthetic benefits.

County and Municipal leaders and public officials in Jefferson County are keenly aware and engaged in efforts to reduce stormwater runoff for the sake of protecting local watersheds and the larger Chesapeake Bay watershed. Trees intercept rain water and have the potential to reduce stormwater runoff by up to 75% for the grounds under their canopy. Establishing a UTC Plan and Goals that will be adopted by each of the municipalities and the County Commission is a crucial component of Jefferson County's effort to reduce stormwater runoff and improve the County's green infrastructure.

Figure 1.

Trees provide urban and developing rural areas with a wide variety of tangible and intangible benefits. A well developed and preserved tree canopy helps communities preserve, protect, and enhance the natural and built environment and assists in reducing excess stormwater runoff. Additionally, tree canopy helps to mitigate the impact of impervious surfaces and protects local and regional waters, such as the Chesapeake Bay. Trees are an asset that appreciate in value over time because they are living and growing. They do, however, require regular maintenance and protection to ensure that the value continues to grow as they reach maturity. Some municipalities have formed Tree Committees and/or hired an arborist to assist with this critical maintenance component.

There are numerous benefits to communities that value trees and work toward implementation of maintaining, improving, and increasing tree canopy. These benefits fall into the following categories:

Environmental/Ecological

- Improve air quality by absorbing pollutants such as carbon dioxide, carbon monoxide, ozone, sulfur dioxide and particulates. In turn, trees produce oxygen.
- Improve the quality of our water and our waterways by reducing sedimentation, absorbing excess nutrients and other pollutants, reducing stream channel erosion and reducing water temperatures
- Reduce stormwater runoff and flooding via interception and evapo-transpiration and by promoting infiltration,
- Improve soil quality by adding organic matter and reducing soil erosion.
- Habitat for wildlife and preservation of native ecosystems
- Reduce the urban heat island effect by shading surfaces, dissipating heat through evaporation, and increasing air movement.

Economic

- Decrease energy costs by shading in the summer (reducing air conditioning costs) and serving as a windbreak in the winter (reducing heating costs).
- Reduce construction and maintenance costs by decreasing costs related to clearing, grading, paving, mowing, and stormwater management.
- Increase property values – The presence of trees and landscaping can increase residential property values up to 20%. Rental rates of commercial properties are also positively affected.
- Stimulate consumer patronage and spending – Consumers shop longer and more often in retail areas shaded by trees. One study reports that consumers are willing to pay up to 11% more for products purchased in shops along tree-lined streets as opposed to shops lacking surrounding trees.

Community/Social

- Increased recreational and educational opportunities.
- Provide shade and block UV radiation
- Buffer wind and noise
- Enhance community aesthetics.

Various studies have also shown that:

- Trees can reduce the stress response of both the human body and mind in conditions in which urban stressors are present
- A greener school environment can decrease symptoms of Attention Deficit-Hyperactivity Disorder and reduce the number of violent or aggressive acts among children.

A Jefferson County UTC assessment was completed by the University of Vermont's (UVM) Spatial Analysis Laboratory in January 2010, while under contract to Jefferson County. This County-wide study, the largest of its kind in the U.S., utilizes the U.S. Forest Service's premier UTC assessment protocol. By combining existing Light Detection and Ranging (LiDAR, U.S. Geological Survey, 2005) and high resolution color infrared imaging data (National Agricultural Imagery Program, 2007), the UVM high resolution land cover data, from which the UTC assessment was derived (<1 meter resolution, U. Vermont 2009) is more than 95% accurate, approximately 20% more accurate than assessments that use only color infrared. The results are currently under review and being edited by the Jefferson County Department of Planning and Zoning. Results of the UTC assessment have been presented to the Jefferson County "Round Table" (an informal assembly of elected officials and leaders) and to the various planning and public officials and interested public.

Figure 2. 2007 color infrared imagery and 2005 LiDAR data were combined by the University of Vermont's Spatial Analysis Lab to produce the high resolution land cover data utilized by Jefferson County for the Urban Tree Canopy assessment.

The UTC assessment delineates the percentage of tree canopy (TC), amount of impervious surface and amount of area open to possible tree canopy. The analysis of Jefferson County, based on high resolution aerial imagery sufficient to enumerate single trees, revealed a tree canopy of about 50,600 acres (termed Existing TC) that corresponds to 38% of all land within the county. The UVM assessment also found that 59% (79,000 acres) of the county was available for tree canopy but currently lacked canopy coverage (termed Possible TC). Possible TC includes non-canopy vegetation (e.g., grass/shrubs), bare earth, and certain paved surfaces (e.g., driveways, sidewalks, parking lots) that, under the right circumstances, could be modified to increase tree cover. Areas termed Not Suitable refer to roads, bodies of water, structures, and other locations where tree canopy coverage is impractical. Due to much of Jefferson County being devoted to agriculture, the county's Existing TC generally occurs in scattered patches. The largest, most contiguous patches occur east of the Shenandoah River in the Blue Ridge Mountain area. Note that agricultural land-cover types were not specifically mapped as part of this project, but are included in the Grass/Shrubs land-cover category.

While the UTC assessment shows in high resolution where tree canopy does and does not exist, it does not specifically identify or recommend where additional trees can be planted. The specific site recommendations and planting specifications are being prioritized in this Plan and goals are being established for the County and each of the municipalities. American Forests, the nation's oldest non-profit conservation organization dedicated to protecting and restoring forest ecosystems, recommends overall tree canopy coverage of 40% for metropolitan areas east of the Mississippi River. This recommendation is commonly referred to by the U.S. Forest Service, West Virginia Division of Forestry, and the Chesapeake Bay Program. The following is a brief summary of the TC data derived for the County and each of the municipalities from the analysis:

Figure 3. Tree Canopy data for Jefferson County, West Virginia

Jefferson County, WV Tree Canopy Facts:

- Jefferson County Total Land Area = 133,661 acres
- Total Tree Canopy Area = 50,603 acres
- 38% of the total land area of Jefferson County is identified as tree canopy.
- 59% of the total land area of Jefferson County is available for additional tree canopy.
- 3% of the total land area of Jefferson County is unsuitable for tree planting.
- To increase Tree Canopy by 1% (to 39%), an additional 1,525 acres would be required to be planted in trees.
- To increase Tree Canopy by 2% (to 40%), an additional 2,861 acres would be required to be planted in trees.
- To increase to 40% Tree Canopy over a 10 yr span, 286 acres per year would have to be forested (assuming zero loss during that time span).
- To increase to 40% Tree Canopy over a 20 yr span, 143 acres per year would have to be forested.

Chapter 3 **Tree Canopy Analysis Methodology and Data**

Unincorporated Areas of Jefferson County, WV Tree Canopy Facts:

Unincorporated Total Land Area = 123,986 acres

Total Tree Canopy Area in Unincorporated Areas = 48,613 acres

39% of the total land area of Unincorporated Areas is identified as Tree Canopy.

58% of the total land area of Unincorporated Areas is available for additional Tree Canopy.

3% of the total land area of Unincorporated Areas is unsuitable for tree planting.

To increase Tree Canopy by 1% (to 40%), an additional 981 acres would be required to be planted in trees.

Bolivar, WV Tree Canopy Facts:

Bolivar Total Land Area = 276 acres

Total Tree Canopy Area in Bolivar = 136 acres

49% of the total land area of Bolivar is identified as Tree Canopy.

33% of the total land area of Bolivar is available for additional Tree Canopy.

18% of the total land area of Bolivar is unsuitable for tree planting.

To increase Tree Canopy by 1% (to 50%), an additional 2 acres would be required to be planted in trees.

Charles Town, WV Tree Canopy Facts:

Charles Town Total Land Area = 3,669 acres

Total Tree Canopy Area in Charles Town = 759 acres

21% of the total land area of Charles Town is identified as Tree Canopy.

70% of the total land area of Charles Town is available for additional Tree Canopy.

9% of the total land area of Charles Town is unsuitable for tree planting.

To increase Tree Canopy by 1% (to 22%), an additional 48 acres would be required to be planted in trees.

Chapter 3 **Tree Canopy Analysis Methodology and Data**

Harpers Ferry, WV Tree Canopy Facts:

Harpers Ferry Total Land Area = 335 acres

Total Tree Canopy Area in Harpers Ferry = 230 acres

69% of the total land area of Harpers Ferry is identified as Tree Canopy.

19% of the total land area of Harpers Ferry is available for additional Tree Canopy.

12% of the total land area of Harpers Ferry is unsuitable for tree planting.

To increase Tree Canopy by 1% (to 70%), an additional 4.5 acres would be required to be planted in trees.

Ranson, WV Tree Canopy Facts:

Ranson Total Land Area = 5,168 acres

Total Tree Canopy Area in Ranson = 759 acres

15% of the total land area of Ranson is identified as Tree Canopy.

78% of the total land area of Ranson is available for additional Tree Canopy.

7% of the total land area of Ranson is unsuitable for tree planting.

To increase Tree Canopy by 1% (to 16%), an additional 53 acres would be required to be planted in trees.

Shepherdstown, WV Tree Canopy Facts:

Shepherdstown Total Land Area = 227 acres

Total Tree Canopy Area in Shepherdstown = 106 acres

47% of the total land area of Shepherdstown is identified as Tree Canopy.

30% of the total land area of Shepherdstown is available for additional Tree Canopy.

23% of the total land area of Shepherdstown is unsuitable for tree planting.

To increase Tree Canopy by 1% (to 48%), an additional 3 acres would be required to be planted in trees.

Chapter 4 Recommendations and Goals for Jefferson County

This Tree Canopy Plan sets forth recommendations for tree canopy goals for the unincorporated areas of the County as well as specific goals for each municipality that address their specific needs. The County's and Municipalities' overall Goals should be utilized in setting priorities related to tree canopy improvement and taken into consideration in a variety of local land use decisions.

The goals and recommendations outlined in this plan are intended to be considered and implemented over a twenty year planning period. They should be reviewed at least every 10 years and/or in conjunction with locally adopted Comprehensive Plans which may rely on these Goals and expand the recommendations.

- Increase Overall County Tree Canopy by 2 percent to 40 percent by 2030 as recommended by the American Forests organization, the USDA Forest Service and the WV Division of Forestry.
[NOTE: April 2008 Green Infrastructure Assessment stated that "Trees in the landscape are so important no matter how big the patch is, that the county should strive to maintain at least 45% forest cover on a watershed basis at minimum, and 51% in watersheds of exceptional value."].
- Increase Overall Tree Canopy in the unincorporated areas of the County by 1 percent to 40 percent by 2030.
- Develop a strategy to add Tree Canopy Coverage along key US and State transportation routes that serve as Gateways to the County and provide an entryway to visitors and residents alike.
- Increase Tree Canopy coverage along key riparian buffers within watersheds that contain primary streams that directly enter the Shenandoah and Potomac Rivers.
- Employ both conservation and strategic restoration of Forests and Stream Corridors to serve as a framework for protection of groundwater, surface water, habitat, and landscape connectivity (source: 2008 Green Infrastructure Assessment).
- Increase Tree Canopy coverage within active agricultural operations along streams and creeks that drain farmland to reduce sedimentation and nutrient loading in receiving streams and rivers.
- Develop an education and outreach program in cooperation with all jurisdictions and the County Extension Service to promote the planting of native tree species on private property through landowner incentive programs; pursue grants to fund such a program.
- Develop policies recommending that landowners water all new trees in the first three years of planting with a commitment by the property owner, through educational materials (handout pamphlets and news releases).
- Review the land coverage data to identify key areas lacking Tree canopy to help prioritize areas to be planted including, but not limited to, additional school site; infilling vacant lots; slowing the flow of stormwater into public areas: such as parking lots, streets, public parks, HOA open space areas; pathways/trails, public buildings, gateways, etc.

Chapter 4 Recommendations and Goals for Jefferson County

- Investigate revenue streams to fund updating the tree canopy assessment every 5 – 10 years in order to monitor and evaluate progress towards goal.
- Develop a mechanism for making the tree canopy assessment data available to the public for future use in reforestation efforts.
- Develop local regulations that ensure that appropriate size and species of trees are located in areas under overhead utility lines and in areas with similar growth restrictions (i.e.: trees that grow over 15 feet tall at maturity should not be planted under the conductor zone on wood pole 138 Kv transmission lines).
- Investigate revenue streams or programs to assist with the removal of invasive species and replacement with native species appropriate to the planting location.
- Review and consider amending Subdivision Regulations and Site Plan development standards to improve policies regarding tree planting and tree and forest protection, including more detailed landscaping plan requirements which detail plant species; encourage native species; require design which integrates landscaping design with stormwater management plans; etc.
- Adopt policies that ensure that tree planting and reforestation efforts restrict the use of invasive species and promote the use of native species throughout the County.
- Establish a policy that requires a developer to conserve a certain percentage of the existing trees before construction or replace with trees native to the area in existing wooded areas after construction with a goal of maintaining or increasing the tree canopy coverage for that property
- Develop local land use policies which employ best management techniques to preserve trees and minimize damage from construction activities such as trenching, soil compaction, and soil clearing and grading.
- Develop implementable land use policies which encourage the retention of existing tree canopy coverage on steep slopes and in riparian buffer areas; pursue ordinance amendments that implement such policies.
- Consider developing implementation recommendations that build upon this planning effort and the 2008 Green Infrastructure Assessment analysis as a part of the 2014 Comprehensive Plan Update, particularly developing land use policies that will help to assure minimizing the fragmentation of the identified core forest areas that contain large patches of intact forest .
- Establish a county-wide Jefferson County Tree Committee to focus on implementing the provisions of this plan and to pursue grant opportunities related to increasing urban tree canopy coverage throughout the County.

This Tree Canopy Plan sets forth recommendations for tree canopy goals for the unincorporated areas of the County as well as specific goals for each municipality that address their specific needs. The following goals are specific to Bolivar and should be utilized in setting priorities related to tree canopy improvement and taken into consideration in a variety of local land use decisions.

The goals and recommendations outlined in this plan are intended to be considered and implemented over a twenty year planning period. They should be reviewed at least every 10 years and/or in conjunction with locally adopted Comprehensive Plans which may rely on these Goals and expand on the recommendations.

- Increase Bolivar's Tree Canopy by 1% to 50% (two additional acres) by 2030.
- Consider appointing a tree committee and pursuing Tree City USA status.
- Develop locally adopted policies that focus on the retention and improvement of existing tree stands including a develop tree maintenance policy and incentives for appropriate tree trimming and maintenance practices.
- Review and consider amending Subdivision Regulations and Site Plan development standards to improve policies regarding tree planting and tree and forest protection.
- Develop a strategy to add Tree Canopy Coverage along US 340 that serves as Gateway to the County and provides an entryway to visitors and residents alike.
- Increase Tree Canopy coverage along key riparian buffers within watersheds that contain primary streams that directly enter the Shenandoah and Potomac Rivers.
- Employ both conservation and strategic restoration of Forests and Stream Corridors to serve as a framework for protection of groundwater, surface water, habitat, and landscape connectivity.
- Develop an education and outreach program in cooperation with all jurisdictions and the County Extension Service to promote the planting of native tree species on private property through landowner incentive programs; pursue grants to fund such a program.
- Develop policies recommending that landowners water all new trees in the first three years of planting with a commitment by the property owner, through educational materials (handout pamphlets and news releases).
- Review the land coverage data to identify key areas lacking tree canopy to help prioritize areas to be planted including, but not limited to, additional school site; infilling vacant lots; slowing the flow of stormwater into public areas: such as parking lots, streets, public parks, HOA open space areas; pathways/trails, public buildings, and gateways; etc.
- Develop local regulations that ensure that appropriate size and species of trees are located in areas under overhead utility lines and in areas with similar growth restrictions (i.e.: trees that grow over 15 feet tall at maturity should not be planted under the conductor zone on wood pole 138 Kv transmission lines).
- Investigate revenue streams or programs to assist with the removal of invasive species and replacement with native species appropriate to the planting location.

Chapter 6 Recommendations and Goals for Charles Town

This Tree Canopy Plan sets forth recommendations for tree canopy goals for the unincorporated areas of the County as well as specific goals for each municipality that address their specific needs. The following goals are specific to Charles Town and should be utilized in setting priorities related to tree canopy improvement and taken into consideration in a variety of local land use decisions.

The goals and recommendations outlined in this plan are intended to be considered and implemented over a twenty year planning period. They should be reviewed at least every 10 years and/or in conjunction with locally adopted Comprehensive Plans which may rely on these Goals and expand on the recommendations.

- Increase Charles Town Tree Canopy by 1% to 22% (48 additional acres) by 2030.
- Maintain the Town's "Tree City USA" status.
- Improve tree planting/shade tree ordinances and policies including provisions for street tree maintenance, improvement and replacement.
- Develop local policies providing that all new street plantings will have root barriers or root deflectors to prohibit sidewalk lifting and will incorporate the correct soil type to encourage tree longevity.
- Maintain the city's tree maintenance program for tree care including pruning street trees and ensuring that all new tree plantings are selected to provide species diversity and maximum benefits for shade and stormwater mitigation. Include times for watering, weeding and periodic tree health assessment using current arboricultural standards in the maintenance schedule.
- Review and consider amending Subdivision Regulations and Site Plan development standards to improve policies regarding tree planting and tree and forest protection.
- Develop a strategy to add Tree Canopy Coverage along US 340 and State Route 9 and other routes that serve as Gateways to the community and provide an entryway to visitors and residents alike.
- Increase Tree Canopy coverage along key riparian buffers within watersheds that contain primary streams that directly enter the Shenandoah and Potomac Rivers, such as Evitt's Run.
- Employ both conservation and strategic restoration of Forests and Stream Corridors to serve as a framework for protection of groundwater, surface water, habitat, and landscape connectivity (source: 2008 Green Infrastructure Assessment).
- Develop an education and outreach program in cooperation with all jurisdictions and the County Extension Service to promote the planting of native tree species on private property through landowner incentive programs; pursue grants to fund such a program.
- Develop policies recommending that landowners water all new trees in the first three years of planting with a commitment by the property owner, through educational materials (handout pamphlets and news releases).

Chapter 6 Recommendations and Goals for Charles Town

- Review the land coverage data to identify key areas lacking Tree canopy to help prioritize areas to be planted including, but not limited to, additional school site; infilling vacant lots; slowing the flow of stormwater into public areas: such as parking lots, streets, public parks, HOA open space areas; pathways/trails, public buildings, and gateways; etc.
- Develop local regulations that ensure that appropriate size and species of trees are located in areas under overhead utility lines and in areas with similar growth restrictions (i.e.: trees that grow over 15 feet tall at maturity should not be planted under the conductor zone on wood pole 138 Kv transmission lines).
- Investigate revenue streams or programs to assist with the removal of invasive species and replacement with native species appropriate to the planting location.

Chapter 7 **Recommendations and Goals for Harpers Ferry**

This Tree Canopy Plan sets forth recommendations for tree canopy goals for the unincorporated areas of the County as well as specific goals for each municipality that address their specific needs. The following goals are specific to Harpers Ferry and should be utilized in setting priorities related to tree canopy improvement and taken into consideration in a variety of local land use decisions.

The goals and recommendations outlined in this plan are intended to be considered and implemented over a twenty year planning period. They should be reviewed at least every 10 years and/or in conjunction with locally adopted Comprehensive Plans which may rely on these Goals and expand on the recommendations.

- Maintain the Town's "Tree City USA" status.
- Develop locally adopted policies that focus on the retention and improvement of existing tree stands including a develop tree maintenance policy and incentives for appropriate tree trimming and maintenance practices.
- Build upon the existing high percentage of tree canopy coverage with a goal of maintaining zero net loss of canopy by protecting and properly maintaining existing tracts of urban forests.
- Review and consider amending Subdivision Regulations and Site Plan development standards to improve policies regarding tree planting and tree and forest protection.
- Develop a strategy to add Tree Canopy Coverage along US 340 and key state transportation routes that serve as Gateways to the community and County and provide an entryway to visitors and residents alike.
- Increase Tree Canopy coverage along key riparian buffers within watersheds that contain primary streams that directly enter the Shenandoah and Potomac Rivers.
- Employ both conservation and strategic restoration of Forests and Stream Corridors to serve as a framework for protection of groundwater, surface water, habitat, and landscape connectivity (source: 2008 Green Infrastructure Assessment).
- Develop an education and outreach program in cooperation with all jurisdictions and the County Extension Service to promote the planting of native tree species on private property through landowner incentive programs; pursue grants to fund such a program.
- Develop policies recommending that landowners water all new trees in the first three years of planting with a commitment by the property owner, through educational materials (handout pamphlets and news releases).
- Review the land coverage data to identify key areas lacking Tree canopy to help prioritize areas to be planted including, but not limited to, additional school site; infilling vacant lots; slowing the flow of stormwater into public areas: such as parking lots, streets, public parks, HOA open space areas; pathways/trails, public buildings, and gateways; etc.
- Develop local regulations that ensure that appropriate size and species of trees are located in areas under overhead utility lines and in areas with similar growth restrictions (i.e.: trees that grow over 15 feet tall at maturity should not be planted under the conductor zone on wood pole 138 Kv transmission lines).

Chapter 7 Recommendations and Goals for Harpers Ferry

- Investigate revenue streams or programs to assist with the removal of invasive species and replacement with native species appropriate to the planting location.

DRAFT DRAFT DRAFT DRAFT

This Tree Canopy Plan sets forth recommendations for tree canopy goals for the unincorporated areas of the County as well as specific goals for each municipality that address their specific needs. The following goals are specific to Ranson and should be utilized in setting priorities related to tree canopy improvement and taken into consideration in a variety of local land use decisions.

The goals and recommendations outlined in this plan are intended to be considered and implemented over a twenty year planning period. They should be reviewed at least every 10 years and/or in conjunction with locally adopted Comprehensive Plans which may rely on these Goals and expand on the recommendations.

- Increase Ranson's Tree Canopy by 5% to 20% (258 additional acres) by 2030.
[NOTE: The American Forests organization, the USDA Forest Service and the WV Division of Forestry recommend a goal of 40 percent tree coverage and the County's 2008 Green Infrastructure Assessment stated that the county should strive to maintain at least 45% forest cover on a watershed basis at minimum, and 51% in watersheds of exceptional value.]
- Develop policies that implement specific recommended average tree coverage percentages by zoning district such as 50% coverage in residential zones, 25% coverage in mixed use zones, 15% coverage in business districts.
- Establish a tree committee to pursue Tree City USA status and to implement a comprehensive street tree planting initiative.
- Develop local land use policies and regulations that encourage the use of well designed and located tree plantings that promote economic development and vitality.
- Develop policies that ensure that all large contiguous areas of impervious surfaces are required to be planned to incorporate well placed, appropriately sized groupings of tree plantings that provide shade, stormwater quality management/detention, and provide a pleasant vehicular and pedestrian experience.
- Develop a plan and program to continue to increase tree canopy on appropriate areas of municipal parks and public lands utilizing citizen volunteers and outreach programs.
- Review and consider amending Subdivision Regulations and Site Plan development standards to improve policies regarding tree planting and tree and forest protection.
- Continue to maintain and plant trees in a nursery area in Ranson, in order to provide a future source of inexpensive native trees for planting along the streets and in other areas around the Municipality.
- Establish economic value/compensatory value of the existing street trees through a professional inventory and utilize this data to draft planting requirements in new retail, employment and industrial areas within the Municipality.
- Develop a strategy to add Tree Canopy Coverage along key US and State transportation routes that serve as Gateways to the community and provide an entryway to visitors and residents alike.
- Increase Tree Canopy coverage along key riparian buffers within watersheds that contain primary streams that directly enter the Shenandoah and Potomac Rivers.

- Employ both conservation and strategic restoration of Forests and Stream Corridors to serve as a framework for protection of groundwater, surface water, habitat, and landscape connectivity (source: 2008 Green Infrastructure Assessment).
- Develop an education and outreach program in cooperation with all jurisdictions and the County Extension Service to promote the planting of native tree species on private property through landowner incentive programs; pursue grants to fund such a program.
- Develop policies recommending that landowners water all new trees in the first three years of planting with a commitment by the property owner, through educational materials (handout pamphlets and news releases).
- Review the land coverage data to identify key areas lacking Tree canopy to help prioritize areas to be planted including, but not limited to, additional school site; infilling vacant lots; slowing the flow of stormwater into public areas: such as parking lots, streets, public parks, HOA open space areas; pathways/trails, public buildings, and gateways; etc.
- Develop local regulations that ensure that appropriate size and species of trees are located in areas under overhead utility lines and in areas with similar growth restrictions (i.e.: trees that grow over 15 feet tall at maturity should not be planted under the conductor zone on wood pole 138 Kv transmission lines).
- Investigate revenue streams or programs to assist with the removal of invasive species and replacement with native species appropriate to the planting location.

Chapter 9 Recommendations and Goals for Shepherdstown

This Tree Canopy Plan sets forth recommendations for tree canopy goals for the unincorporated areas of the County as well as specific goals for each municipality that address their specific needs. The following goals are specific to Shepherdstown and should be utilized in setting priorities related to tree canopy improvement and taken into consideration in a variety of local land use decisions.

The goals and recommendations outlined in this plan are intended to be considered and implemented over a twenty year planning period. They should be reviewed at least every 10 years and/or in conjunction with locally adopted Comprehensive Plans which may rely on these Goals and expand on the recommendations.

- Reactivate the Town's "Tree City USA" status.
- Maintain and improve the health of existing trees along streets, public rights-of-way and in parks.
- Review and consider amending Subdivision Regulations and Site Plan development standards to improve policies regarding tree planting, tree canopy retention and forest protection, especially on steep slopes and in riparian areas.
- Review and consider amending Subdivision Regulations and Site Plan development standards to improve policies regarding tree planting and tree and forest protection.
- Update recommended tree list to encourage planting of appropriate native trees and enhance diversity.
- Update Shepherdstown Tree Inventory to incorporate German Street streetscape plantings and other changes in trees along streets, public rights-of-way and in parks.
- Collaborate with the Shepherd University Faculty Tree Committee to increase Shepherdstown's overall Tree Canopy by 3% to 50% (7 additional acres) by 2030.
- Develop a strategy to add Tree Canopy Coverage along key US and State transportation routes that serve as Gateways to the City and County and provide an entryway to visitors and residents alike.
- Increase Tree Canopy coverage along key riparian buffers within watersheds that contain primary streams that directly enter the Shenandoah and Potomac Rivers.
- Employ both conservation and strategic restoration of Forests and Stream Corridors to serve as a framework for protection of groundwater, surface water, habitat, and landscape connectivity (source: 2008 Green Infrastructure Assessment).
- Develop an education and outreach program in cooperation with all jurisdictions and the County Extension Service to promote the planting of native tree species on private property through landowner incentive programs; pursue grants to fund such a program.
- Develop policies recommending that landowners water all new trees in the first three years of planting with a commitment by the property owner, through educational materials (handout pamphlets and news releases).

Chapter 9 Recommendations and Goals for Shepherdstown

- Review the land coverage data to identify key areas lacking Tree canopy to help prioritize areas to be planted including, but not limited to, additional school site; infilling vacant lots; slowing the flow of stormwater into public areas: such as parking lots, streets, public parks, HOA open space areas; pathways/trails, public buildings, and gateways; etc.
- Develop local regulations that ensure that appropriate size and species of trees are located in areas under overhead utility lines and in areas with similar growth restrictions (i.e.: trees that grow over 15 feet tall at maturity should not be planted under the conductor zone on wood pole 138 Kv transmission lines).

Chapter 10 Planting Priorities and Project Implementation

This Plan and its Goals are a part of a larger effort to improve water quality within the Chesapeake Bay Watershed, while providing other benefits that increased Tree Canopy provide to a community. This plan was prepared through an Urban Tree Canopy (UTC) Grant awarded to the Jefferson County Commission, in partnership with the Cities of Ranson and Charles Town, by the WV Division of Forestry in 2010.

This grant allowed the County to build on the 2009 TC assessment effort to work towards two primary tasks:

- a. Utilizing the data from the study conducted by the University of Vermont containing land coverage analysis to develop an urban tree canopy assessment and create a long term management plan, setting Urban Tree Canopy Goals for the County and the five municipalities within the County; Bolivar, Charles Town, Harpers Ferry, Ranson and Shepherdstown (this document).

- b. Plan and execute multiple Spring 2011 tree planting events in priority areas using grant and matching funds to purchase trees, site preparation and planting and other related planting supplies including: mulch, stakes and ties, watering bags, hoses and tanks.

The development of the Plan and Goals is intended to lay the groundwork for future grants and projects to work towards improving and increasing the UTC within Jefferson County and its municipalities in years to come. In addition to the Plan and Goals, this grant provided for the following plantings that occurred in the Spring of 2011 “kicking off” this County-wide planning effort.

2010 Forestry UTC Grant Activities

County and municipal planners, working with the WV Tributary Team, developed specific planting plans for the Spring of 2011. In addition to planning plantings to maximize the environmental benefits of trees, all plantings will also be developed for the purpose of outreach and public education on the value of trees. In an effort to foster wider acceptance of voluntary best management practices (BMPs) for urban tree conservation and plantings, public plantings under the grant included an educational component to encourage private citizens to “reforest” their own properties and/or plant shade trees.

The following priority areas were identified to implement the current grant, which was limited to public lands within urban areas. These sites were chosen, based on the UTC assessment, for their lack of adequate tree canopy in relation to their potential for planting and for maximum stormwater runoff mitigation. Tree planting sites considered included public school grounds, transportation corridors and public parks. Specific planting plans were developed for each of the eight plantings that occurred, with both functionality and aesthetics in mind. All trees planted were native species to the area.

Chapter 10 Planting Priorities and Project Implementation

Priority Planting Areas

Schools offer a unique opportunity for public education through involvement of the students, parents and teachers. The grounds at a number of **Jefferson County Public Schools** were identified with an insufficient tree canopy. The environmental, ecological and social benefits of trees on school grounds will serve to enhance the learning environment for both students and faculty. Plantings occurred in March and April 2011 utilizing these grant funds at the following schools:

- Jefferson High School
- CW Shipley Elementary School
- Page Jackson Elementary School
- Driswood Elementary School
- North Jefferson Elementary School

Shepherd University was also a target site for increased tree canopy. Through grant funds, the University received 86 trees, which were planted by volunteers in a highly publicized tree planting event.

Road right-of-ways (ROW) often offer potential for tree plantings, if located in such a way as to not interfere with public safety or highway operations. Road ROW plantings are highly visible and demonstrate the benefit of cost savings from reduced mowing, the aesthetic value of trees and their ability to reduce stormwater runoff. Examples of areas that might be appropriate for road right-of-way plantings include the new Route 9 corridor (which has a limited landscaping plan along the bike trail), Route 51 and the urbanized portion of US 340 east of Charles Town and Ranson. For the purpose of utilizing the 2010 grant funds, no road right-of-ways were chosen for a tree planting; however, plantings in these areas continue to be a priority for the County and municipalities.

Public parks that have aging and/or insufficient tree canopy can be ideal locations to engage public volunteers in planting projects, as they are visible and the communities are often invested in the park areas. Park plantings, in addition to providing the environmental benefits of shade and cooler ambient temperature, offer an opportunity to demonstrate proper planting techniques to the general public and disseminate information on the benefits of trees to encourage citizens to plant trees on private property. While parks typically have more tree canopy and open green space than other “urban” areas might, focusing on maximizing the extent of the tree canopy in parks helps to increase the net tree canopy for a municipality. Charles C. Marcus Field in Ranson and Willingham Knolls Park in Charles Town were chosen for a “double planting event”, as a part of this grant funding cycle -. These plantings were widely advertised to ensure maximum public involvement and outreach.

Approximately 450 trees of 26 different native species were planted in the Spring 2011 under this grant. Utilizing a forestry standard of 109 trees per acre, this is the equivalent of an increase in the Tree Canopy of approximately 4 acres.

Chapter 10 Planting Priorities and Project Implementation

Next Steps

The County and each municipality will work to implement the goals established in this document and develop local regulations to ensure that the goals are reached and community benefits are maximized. The Urban Tree Canopy Working Group should meet annually to report back to each other progress made and to collaborate on upcoming tree planning and planting efforts in each jurisdiction.

Grants should be pursued to allow future tree plantings on private and public properties. A program should be developed to implement the utilization of grant funds and to document the use of such funds towards the recommended tree canopy coverage goals.

The Tree Committees that have been established should coordinate their Public Outreach and Education efforts to make the most effective use of these efforts and to ensure that the goals of this plan is being communicated to the public in a consistent manner.
