The Score should be stated as the number correct out of 60.

Total Number of 6th Grade Students Participating: _____

Average Score of Those Students: _____

In order to be fair to all schools & students in the Conservation District and to receive the full benefits from the Samara Exam, we encourage teachers to give all 6th grade students in their class an opportunity to participate.

Please Return Scores by the last week of April!!
**Return your exam score sheets to your local
Conservation District Office.**

1. The natural foods that the animal needs to be healthy may be replaced by an unhealthy diet.
2. Deer are killed and injured along park roads because they are attracted to roadside feeding areas.
3. Deer used to being fed may accidentally or purposefully injure a human.
4. Deer congregating at feeding areas increase the risk of transferring parasites which can transmit diseases to humans such as the deer tick and Lyme's disease.
5. Congregating at feeding areas may increase the stress level of deer with a resulting decrease in health.
6. Deer lose their innate fear of people and develop unnatural feeding patterns and other behavior.
7. Deer which become dependent on "handouts" during the Spring, Summer and Fall may starve in the Winter when not as many humans are around to feed them.
